

SHAHROZ AHMED SHAIKH

Unity Developer | XR (VR/AR/MR) Software Engineer

Karachi, Pakistan | shahroz1995007@gmail.com | +92 3323594399 | linkedin.com/in/shahrozahmed

PROFESSIONAL SUMMARY

Experienced Unity Developer and XR Engineer with 7+ years of professional experience building VR/AR/MR applications, real-time simulations, and cross-platform interactive systems. Proven expertise in C#, VR performance optimization, instructional simulations, and 3D asset creation. Led high-impact VR training projects for UK educational and corporate sectors. Skilled in Agile development, team leadership, and engineering immersive learning environments.

KEY TECHNICAL SKILLS

Unity Development: VR/AR/MR interactions, physics simulation, UI Toolkit, Addressables, Timeline, VFX, shader programming

XR Platforms: Oculus Quest 2/3, Pico 4, HTC Vive, OpenXR, WebXR, Steam VR

C#, OOP principles, design patterns, SOLID principles

3D Tools: Blender (modeling, UV unwrapping, rigging, skeletal animation)

Optimization: Draw call batching, GPU/CPU profiling, shader optimization, LOD systems, occlusion culling

Mobile Development: Android builds, APK optimization, performance tuning for standalone headsets

Development Pipelines: Git, Jira, Agile/Scrum, CI/CD fundamentals, code review

PROFESSIONAL EXPERIENCE

VR Development Team Lead | The Project Management College

London, UK (Remote) • April 2023 – Present

- Managed end-to-end VR development lifecycle for corporate training and safety simulation projects.
- Designed and delivered immersive VR learning experiences as a replacement for traditional textbook-based training.
- Architected and optimized VR environments targeting standalone headsets (Meta Quest 2/3, Pico 4) within strict performance budgets.
- Led team sprint planning, pull request code reviews, 3D asset workflows, and delivery milestone scheduling.
- Collaborated with subject matter experts (SMEs), instructional designers, and production teams to align VR content with learning objectives.
- Reduced scene draw calls by up to 40% through batching, LOD implementation, and shader optimization strategies.

Virtual Reality Software Engineer | Excelr8 Group Ltd

London, UK (Remote) • December 2022 – April 2023

- Developed interactive VR training modules with advanced grab, physics, and locomotion interaction systems.
- Designed UI/UX flows for VR training applications using Unity XR Interaction Toolkit.
- Conducted GPU/CPU performance profiling and implemented rendering optimizations to meet 72 fps targets on standalone hardware.
- Delivered cross-platform VR deployments across Oculus, Pico, and PC VR headsets with consistent performance benchmarks.

Game Developer & Designer | Futurealiti Inc

Karachi, Pakistan • January 2020 – December 2022

- Built and shipped multiple mobile games for Android platform using Unity engine and C#.

- Created 3D assets, character animations, and level designs using Blender and Unity.
- Produced factory walkthroughs and product visualization simulations for industrial clients.
- Ensured performance stability and compatibility across a wide range of Android devices with varying hardware specifications.

Software Engineer | Habib Oil Mills

Karachi, Pakistan • August 2019 – January 2020

- Developed and maintained internal software tools to support manufacturing and business operations.
- Collaborated with cross-functional teams to gather requirements and deliver software solutions.
- Gained early professional experience in enterprise software development lifecycle and deployment.

EDUCATION

Bachelor of Engineering – Computer Software Engineering

Muhammad Ali Jinnah University, Karachi, Pakistan

KEY ACHIEVEMENTS

- Delivered 10+ end-to-end VR training applications used by UK corporate and educational clients.
- Led a team of 4 developers across two concurrent VR projects while maintaining delivery timelines.
- Optimized standalone VR apps to achieve stable 72 fps on Meta Quest 2 devices with complex 3D environments.
- Transitioned from individual contributor to team lead role within 6 months of joining a UK-based VR studio.

CORE COMPETENCIES

- Immersive Learning Environment Design
- Real-Time 3D Rendering & Optimization
- Cross-Platform XR Deployment (Android/PC/Standalone)
- Agile Team Leadership & Sprint Management
- Interactive Simulation Architecture
- 3D Asset Pipeline & Asset Workflow Management
